                                                                                                                                                                                                                              The present invention describes a polypeptide (I) comprising a component selected from: (a) a polypeptide epitope having any of the 503 fully defined sequences of 8-33 amino acids (SEQ ID NO:108-610); (b) an epitope cluster comprising the polypeptide of (a); (c) a polypeptide having substantial similarity to (a) or (b); (d) a polypeptide having functional similarity to (a) or (b); (d) a polypeptide having functional polypeptide of (a)-(c); or (e) a nucleic acid encoding the polypeptide of (a)-(d). (I) has vincide and cytostatic activities, and can be used in vaccines. The methods and compositions of the present invention are useful for the diagnosis and/or treatment of viral infections, cancers and tumours. The present sequence is used in the

PRO polypeptide e.g., PRO69614, PRO71106, or PRO86388 useful for ing an immune related disorder such as systemic lupus erythematosus, atoid arthritis, osteoarthritis, juvenile chronic arthritis or
                                                                                                                                                                                                                                                                                                                                                                                                                Human, PRO, immune related disorder; systemic lupus erythematosus; rheumatoid arthritis; osteoarthritis; juvenile chronic arthritis; systemic sclerosis; Sjogren's syndrome; vasculitis; sarcoidosis; autoimmune haemolytic anaemia; autoimmune thrombocytopenia; thyroiditis; diabetes mellitus; renal disease; demyelinating disease; central nervous system; peripheral nervous system; peripheral nervous system; peripheral nervous system; chronic polymeuropathy; Guillain-Barre syndrome; chronic inflammatory demyelinating polymeuropathy.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The invention relates to human PRO polypeptides and the polymucleotides encoding them. The polypeptides and polymucleotides are useful for treating and diagnosing immune related disorders in mammals. The immune related disorders include systemic lupus erythematosus, rheumatoid arthritis, osteoarthritis, juvenile chronic arthritis, systemic sclerosis, Sjogren's syndrome, vasculitis, sarcoidosis, autoimmune hemonytic anemia, autoimmune trombocytropenia, thyroiditis, diabetes mellitus, immune-mediated renal disease, demyelinating diseases of the central or peripheral nervous system, demyelinating polyneuropathy, gollian-Barre syndrome and chronic inflammatory demyelinating polyneuropathy, invention.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Policimal growth factor receptor precursor - chicken
N;Contains: protein-tyrosine kinase (EC 2.7.1.112) erbB
C;Species: Gallus gallus (chicken)
C;Date: 28-Feb-1986 #sequence_revision 05-May-1995 #text_change 09-Jul-2004
C;Accession: A27720; A00643
R;Lax I; Johnson, A.; Howk, R.; Sap, J.; Bellot, F.; Winkler, M.; Ullrich, A.; Vennst.
A;Title: Chicken epidermal growth factor (EGF) receptor: CDNA cloning, expression in monapterence number: A27720; MUID:88261272; PMID:3260329
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              SECRPRFRELVSEFSRMARDPORFVVIQ-NEDLGPASPLDSTFYRSLLEDDDMGDLVDAE 1021

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             epidernal growth factor receptor homolog precursor - rat
NyAlternate names: ErbB3 protein; HER3 protein
C;Species: Rattus norvegicus (Norway rat)
C;Date: 17-Jan-1996 #sequence_revision 19-Apr-1996 #text_change 16-Aug-2004
C;Accession: JC4387
R;Hellyer, N.J.; Kim, H.H.; Greaves, C.H.; Sierke, S.L.; Koland, J.G.
Gene 165, 279-284, 1995
A;Title: Cloning of the rat ErbB3 cDNA and characterization of the recombinant p
A;Reference number: JC4387; MUID:96096535; PMID:8522190

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                                                                                                                                          A; Molecule type: protein A; Molecule type: protein A; Molecule type: protein A; Molecule type: Dobes A; Molecule type: Dobes A; Molecule type: 2-31 cDEF.
C; Comment: The source of this protein was an extrachromosomal plasmid.
C; Comment: The precursor is cleaved by endogenous proteinase activity to form light (fra dual chains are not toxic when separated). The amino end of the heavy chain (fragment B) C; Comment: Pragment D forms inon channels in a lipid bilayer. Fragment C binds to garglid C; Comment: This potent neurotoxin binds to peripheral neuronal synapses, is internalized presynaptic neurons. It inhibits neurotransmitter release by proteolytic cleavage of sy

                             neurotoxin.";
Nat. Struct. Biol. 4:788-792(1997).
-!- FUNCTION: Tetamus toxin acts by inhibiting neurotransmitter
release. It binds to peripheral neuronal synapses, is internalized
and moves by retrograde transport up the axon into the spinal cord
where it can move between postsynaptic and presynaptic neurons. It
inhibits neurotransmitter release by acting as a zinc
endopeptidase that catalyzes the hydrolysis of the 76-Gln-|-Phe-77
bond of synaptobrevin-2.
                                                                                                                                                                                                                                                                                                                                                                                     synaptobrevin 2.

COFACTOR: Binds 1 zinc ion per subunit (By similarity).

SUBUNIT: The precursor polypeptide is subsequently cleaved to yield subchains L and W. These remain linked by a disulfide br and are non-toxic after separation.

MISCELLANEOUS: The C-terminus of the heavy chain binds to
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Tetanus toxin light chain.
Tetanus toxin heavy chain.
Zinc (catalytic) (By similarity)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        By similarity.
